KMIT 2-1 2024-25 Project Milestones

In the Project School we are preparing students to be engineers - given a problem statement, collaborate with fellow team members to research, design, develop and implement a solution during the semester.

As part of this process we are expecting the students to meet the following milestones. Each student should upload a video of three to five minutes on the project portal detailing their work done until that milestone.

Scope of the project

What is your basic understanding of the scope of the project? What business case does the project address? Who are the typical users of the solution? How does the solution help those users?
Completion date: **Sep 2, 2024**

Plan to execute the project

What are the main components of the solution and how do they communicate with each other; underlying data structures in the app; tech stack used; different types of roles in the app; any of interfaces to be developed; datasets that will be used and how will they be processed; input and output screens; workflow; any specific business logic to be coded - what is the source of this information
Completion date: **Oct 25, 2024**

Demo of the solution

Walk through of the solution/application showing the typical use cases along with potential upgrades to the solution.
Completion date: **Dec 15, 2024**
